

AI Debate Questions

1. AI Replacing Jobs

- **Debate Motion:** *This house believes that governments should limit the use of AI in corporations to protect human employment.*
- **The Conflict:** One side argues that rapid automation will cause massive job displacement, leaving millions of workers without a livelihood before society can adapt. The other side believes AI will liberate humans from boring, repetitive tasks, allowing them to focus on creative, high-level work while boosting the economy.
- **Useful Vocabulary:** *Displacement, economic shock, automation, livelihood, liberate.*

2. AI Use in Coursework

- **Debate Motion:** *This house believes that using AI tools to write essays and solve assignments undermines the true purpose of education.*
- **The Conflict:** Supporters of the motion argue that relying on AI for coursework weakens students' critical thinking, memory, and writing skills, turning them into passive editors. Opponents argue that AI is an essential "tool for thought" that helps students overcome writer's block, structure arguments, and learn faster.
- **Useful Vocabulary:** *Metacognition, cognitive musculature, writer's block, tool for thought, undermine.*

3. AI Reliability, Accuracy, Bias, and Fairness

- **Debate Motion:** *This house believes that AI tools are too unreliable and biased to be used for making critical decisions about people's lives.*
- **The Conflict:** Opponents of AI use argue that because these systems are trained on historical human data, they naturally inherit and amplify our prejudices, leading to unfair treatment in areas like job hiring or court sentencing. Furthermore, AI "hallucinations" make the technology inaccurate. Supporters, however, argue that human decision-makers are far more biased, emotional, and inconsistent, and that algorithms can be constantly audited and corrected to be much fairer and more reliable than any human.
- **Useful Vocabulary:** *Amplify, inherent bias, hallucination, replicate, fairness.*

4. AI Art and Human Creativity

- **Debate Motion:** *This house believes that AI-generated art, music, and literature cannot be considered "true" creativity and should not receive legal copyrights.*
- **The Conflict:** Supporters of the motion believe that genuine art requires living human experiences, emotions, and a deep connection to the real world. They argue that AI simply mimics and duplicates existing human data, effectively creating a boring "hive mind" of repetitive ideas. Opponents argue that AI is merely an advanced "tool for thought" that enhances human imagination, and that the person guiding the AI deserves full credit and financial reward for the final product.
- **Useful Vocabulary:** *Hive mind, duplicate, mimic, intellectual property, enhance.*

5. AI is Dangerous

- **Debate Motion:** *This house believes that artificial intelligence poses an existential threat to the future of humanity.*
- **The Conflict:** Optimists believe that public fears are exaggerated by science fiction and corporate hype, and that AI is completely under human control. Alarmists warn that as AI rapidly evolves, we risk losing our agency to machines that we can no longer understand, control, or safely shut down.
- **Useful Vocabulary:** *Existential threat, agency, exaggerated, hype, evolve.*
